the recaps of lessons are good if I've missed the lesson or if I didn't understand something and need to review it

Wish every teacher did this!

Especially helpful when I have missed a lesson, allows me to catch up easily and quickly

I think it's great because I can easily recall/find out what we have done in our lessons and the homework tasks

Good if you've missed a lesson

Yes, its really good to be able to look over what we have done in class and it makes catching up so much easier.

I find it very useful if you have missed the lesson because it is quick and easy to catch up.

After missing a lot of lessons due to drama or school trips I have really easily been able to keep up with the class work and to come to the next lesson prepared for the next section of the topic. It is brilliant and makes it so much easier!

If I missed the lesson I can easily see what I need to catch up.

if we miss a lesson it s useful to know exactly what we've missed.

You put all the sheets given out on the website which is useful as if someone is absent they can print the sheets of themselves and find out what they missed.

In my opinion, I like the website for this reason. Even if the popular vote is against the continuation of homework being set on the website it would still be extremely useful to be able to access the content of lessons/topics covered so that if one is unable to come into school they can easily catch up.

It helpfully recaps the lesson's topics and it is great when the teacher gives links to videos/other websites that can provide extra information on topics covered in the lesson. It is also useful to provide links to notes we were copying down in class, as sometimes teachers need to move on and pupils may not have enough time to complete their notes.

it is useful if i miss a lesson

When I missed a lesson I found it very easy to catch up.

if I miss a class this website makes it extremely easy to catch up on the work.

I find it a helpful way to get an overview of what we did in class. However, it would be more useful if the notes from the lesson were also there.

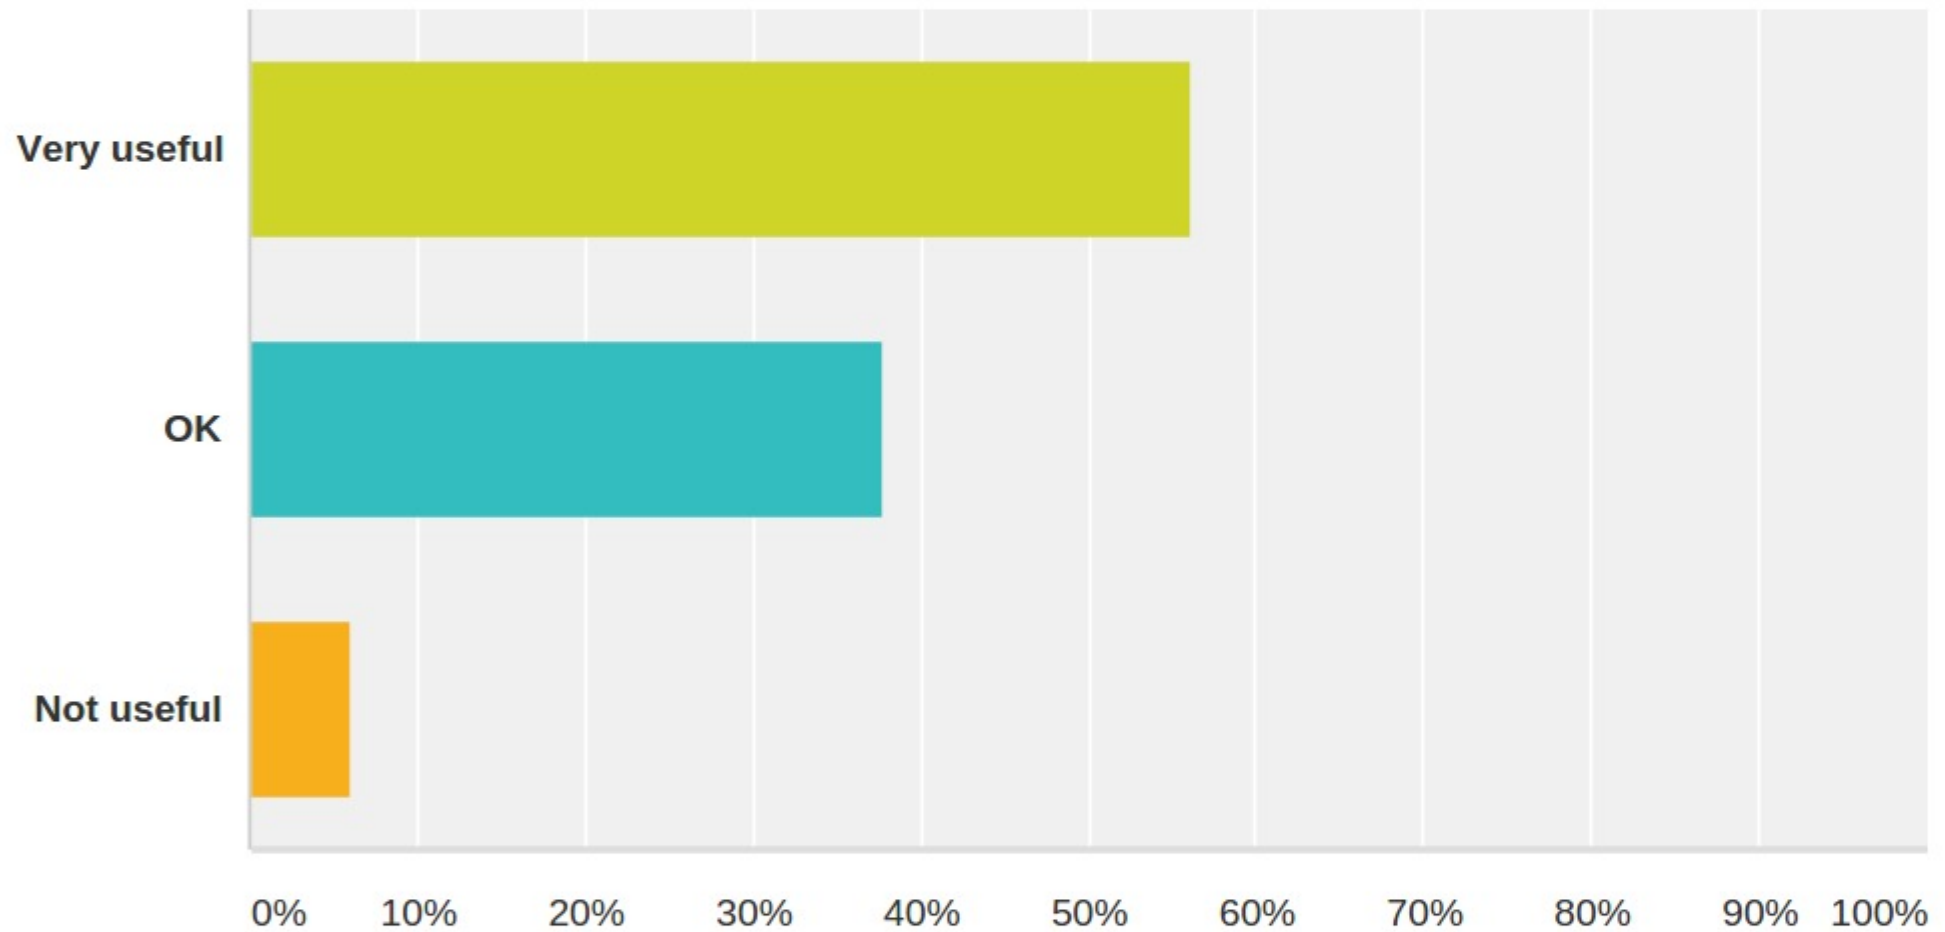

It's very helpful as it refreshes what you learnt in the lesson and has the information in case you missed the lesson.

Very useful for catching up on missed lessons.

It is useful for revision

I use the website to record and set homework - how useful do you find this?

maybe remind us every lesson on the homework just so we don't forget

Again good if you've missed a lesson - means you don't rely on asking around

Its good because we can watch videos that are really useful to go over things in the lesson, however we can only see it when we have internet which means theres only a specific time when we can do it.

It is ok although it is a bit of a pain not knowing what the homework is until you have checked the website because then you don't know which resources the homework requires.

If you lose your diary and planner you know your physics hw can always be found here. If need extra help in a topic can look back and do some past hw again to revise.

Can check it anywhere eg if leave homework diary at school

Set the HW in class so we know wether to take home text books or not

it is a good idea, but can cause problems with knowing whether to carry a textbook home, or if you have a free right after the lesson and the homework is not online yet.

I prefer you give us the hw in class

It is useful since we need to get to next lessons on time, so there is often not enough time to write down homework in our planners. However, it is of limited use because it depends on the teacher's ability to remember to record homework online.

i don't always have time to write down homework

When you don't tell us if we need our textbook I don't bring it home with me.

would rather be given it in class

I know when the homework is due as I don't normally write it down.

I can easily access the homework, even if I was absent.

but you don't tell us whether we need our textbook or not so i end up taking all of my stuff home which is heavy

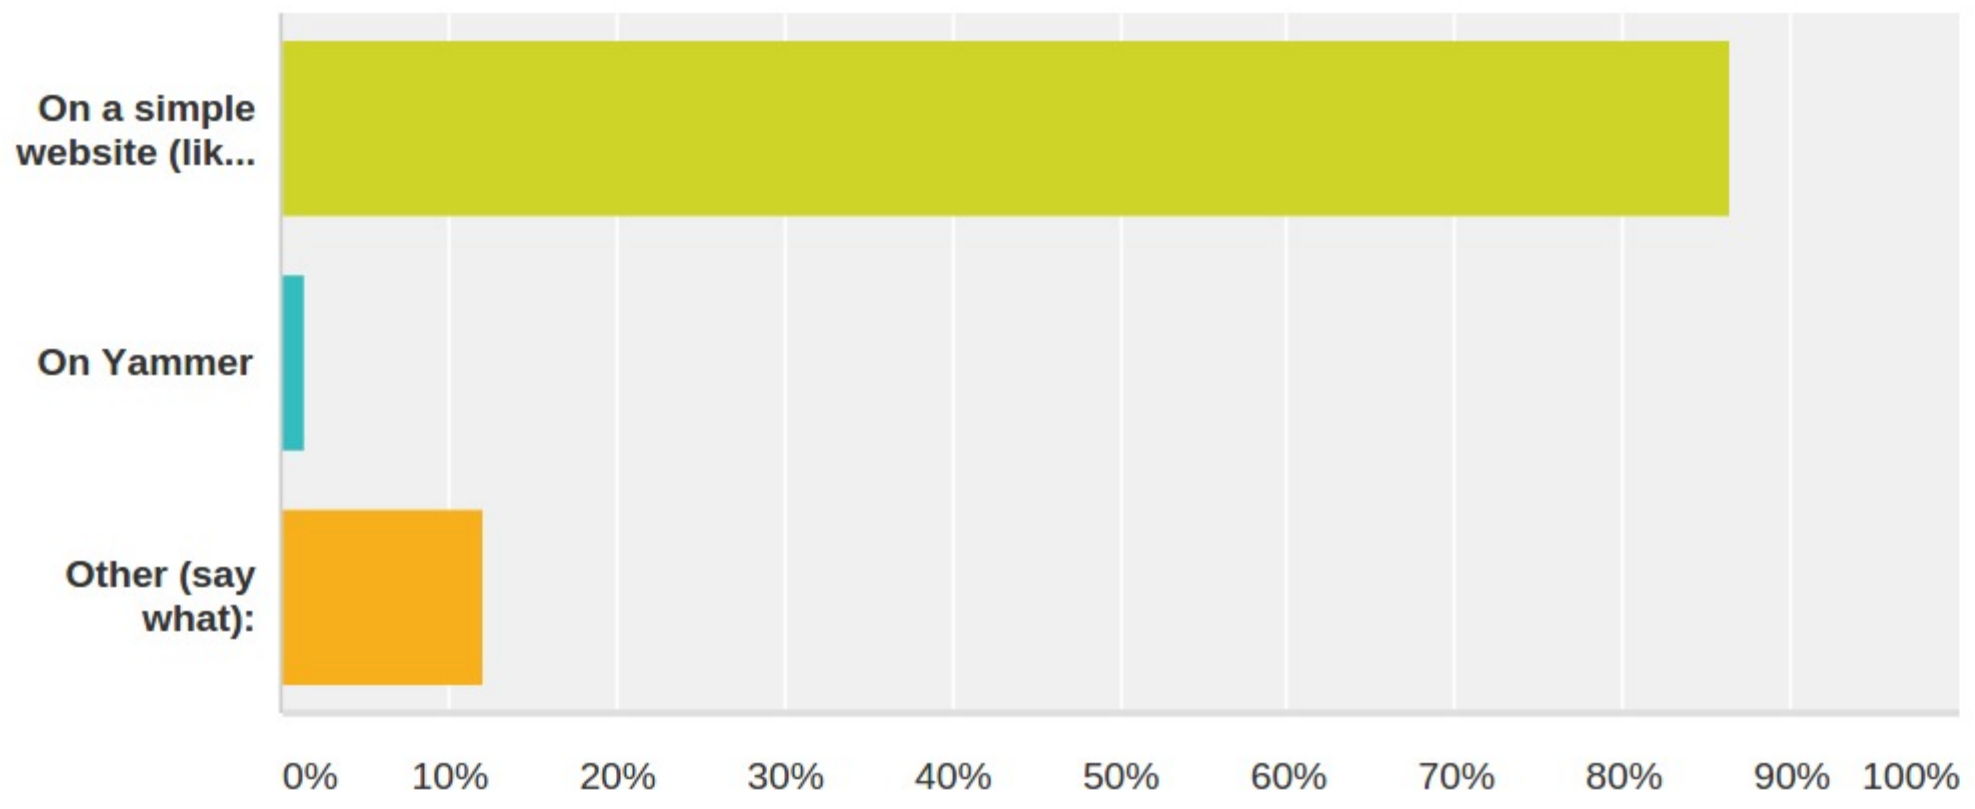

Easy to forget about

This is great because we don't have to search for videos, the links are right there. It would be nice to be told what the homework is in the lesson as well, in case you don't have easy internet access.

Its useful however I like to have it hw diary as well

Assuming I continue to record classwork and homework online, where would you prefer it to be recorded?

Answer Choices	Responses
On a simple website (like phys.mrgravell.com)	86.36% 57
On Yammer	1.52% 1
Other (say what):	12.12% 8

Perfect as it is

I check the website much more regularly than I check Yammer, because I know that I have to check website after each lesson and write; "check website" into my planner

Very easy access and doesn't require a login which most people may forget.

A website like [phys.mrgravell.com](https://www.mrgravell.com) or a more generic one for every subject such as:
<https://www.showmyhomework.co.uk>

i don't understand yammer and i don't want to get it or confuse myself by remembering a different place that the homework will be

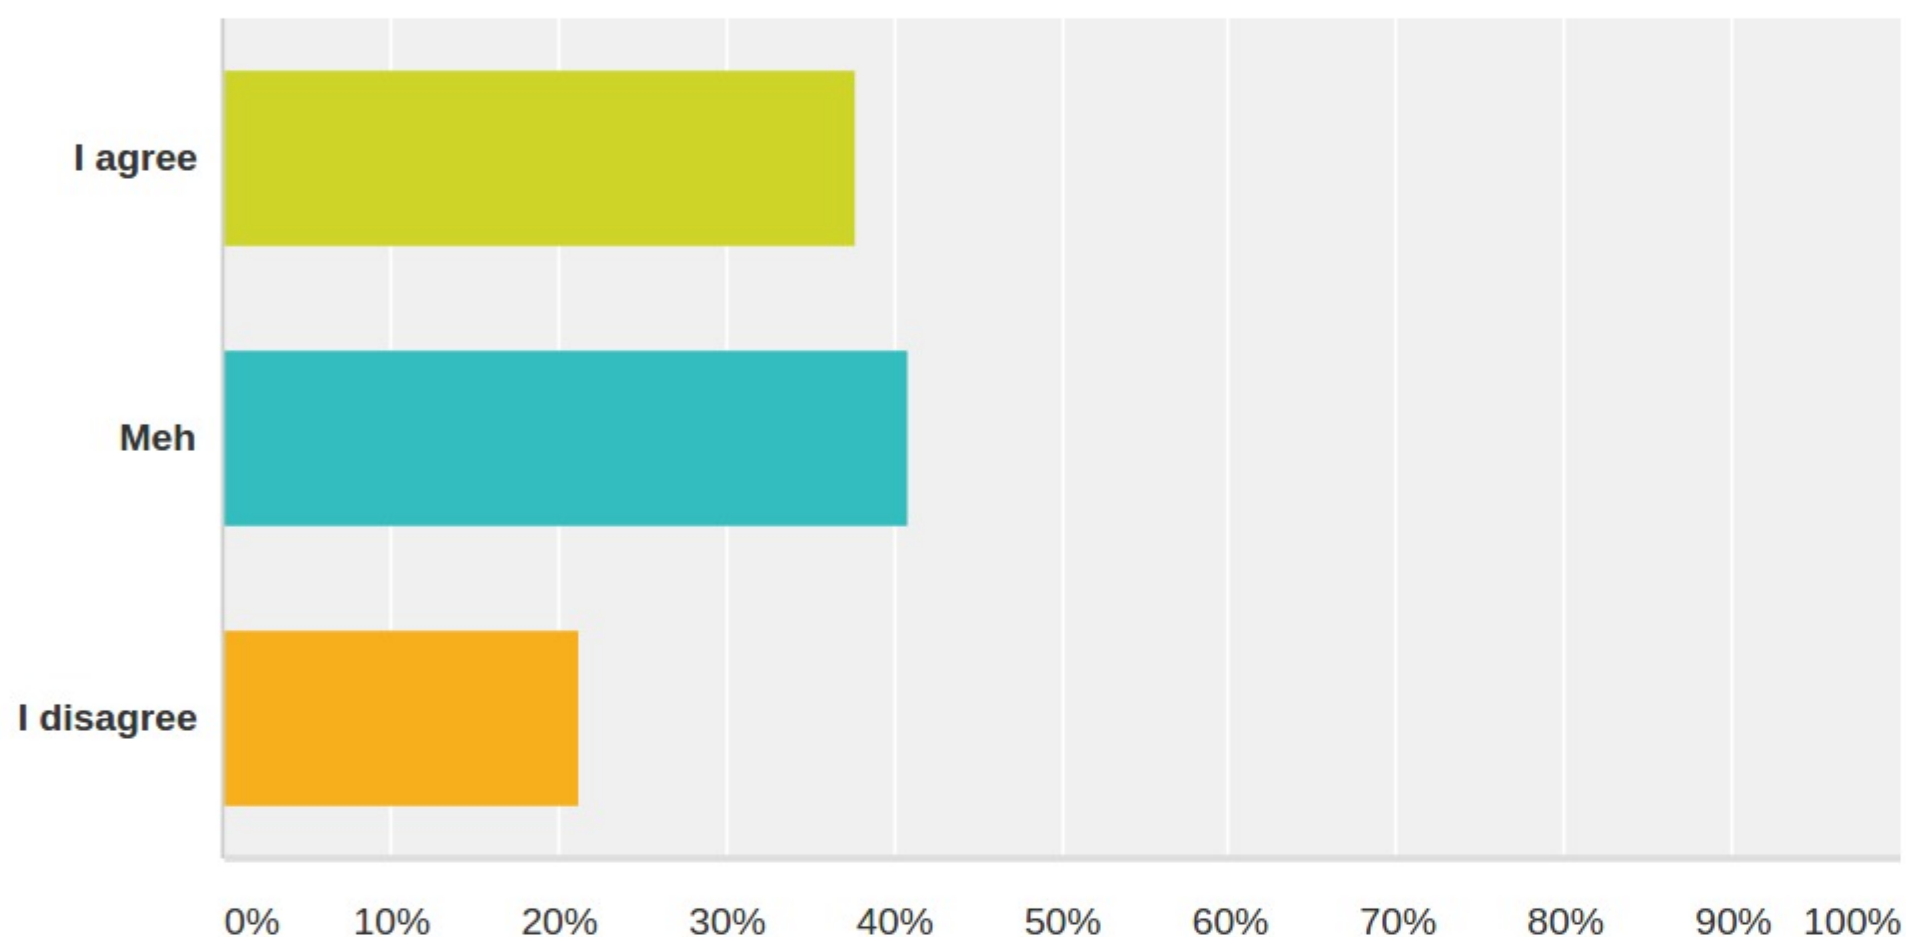

Also via email would be helpful

Please not on yammer!

Keep it on the website it's on now

Reason 1: I don't think it is the best use of my time or your time to spend lots of time in lessons copying down notes (especially about easy stuff) - this is not a very active task and I don't think it results in the most effective learning.

Most of us learn better by being active tbh

Notes make revision so much easier, they are more condensed than the textbook

Not everyone finds all things we do 'easy'

Writing notes is beneficial as it means we do not have to write notes out when revising - instead we can simply read over past notes to refresh our understanding.

I think it's a good method because it allows you to consolidate what you have learnt

I like making notes so that when it comes to revising it's easy to answer questions as I have notes to refer to

Works for easy stuff but for harder topics better to do experiment etc. discuss findings and then make notes so we are actually made to learn it.

Yes but if we do it in class we can ask questions. I do agree videos are a good way of consolidating what we have learnt or introducing a topic.

I agree this a more active way of learning although if we wrote notes in the lesson, we could more easily check the meaning of something we didn't understand.

I like this method but feel we could make a few more brief notes just to make sure it is in our head properly but I like doing the bulk of the notes in hw time so we can always refer to our notes for revision and to consolidate what we learnt in the lesson.

but the videos and note taking homeworks are very time consuming

Though videos are good, concise and brief class summary notes are too.

'meh'

it is very useful to have notes, but I would find it even better to have them printed out on sheets (although this might make a lot of work for teachers.) I also worry that the notes will not be comprehensive and detailed enough.

- We could come up with questions we wanted answered, and wouldn't have a teacher around to answer them or could be unable to remember the questions in the following lesson. - Often this isn't a problem. We don't rarely spend lots of time in lessons copying down notes - usually the notes are brief. - I find it useful writing down notes in lessons and then having them be explained and expanded on by the teacher as it often increases my understanding of a topic.

sometimes i don't fully understand it and want the notes to be explained by you and written down in a way that i will remember

writing notes in class is the best as it can be explained by the teacher

I think it's an okay homework but I don't really ever learn from it.

I also find it easier to have an overview of the topic before hand, and then can ask any questions in the lesson.

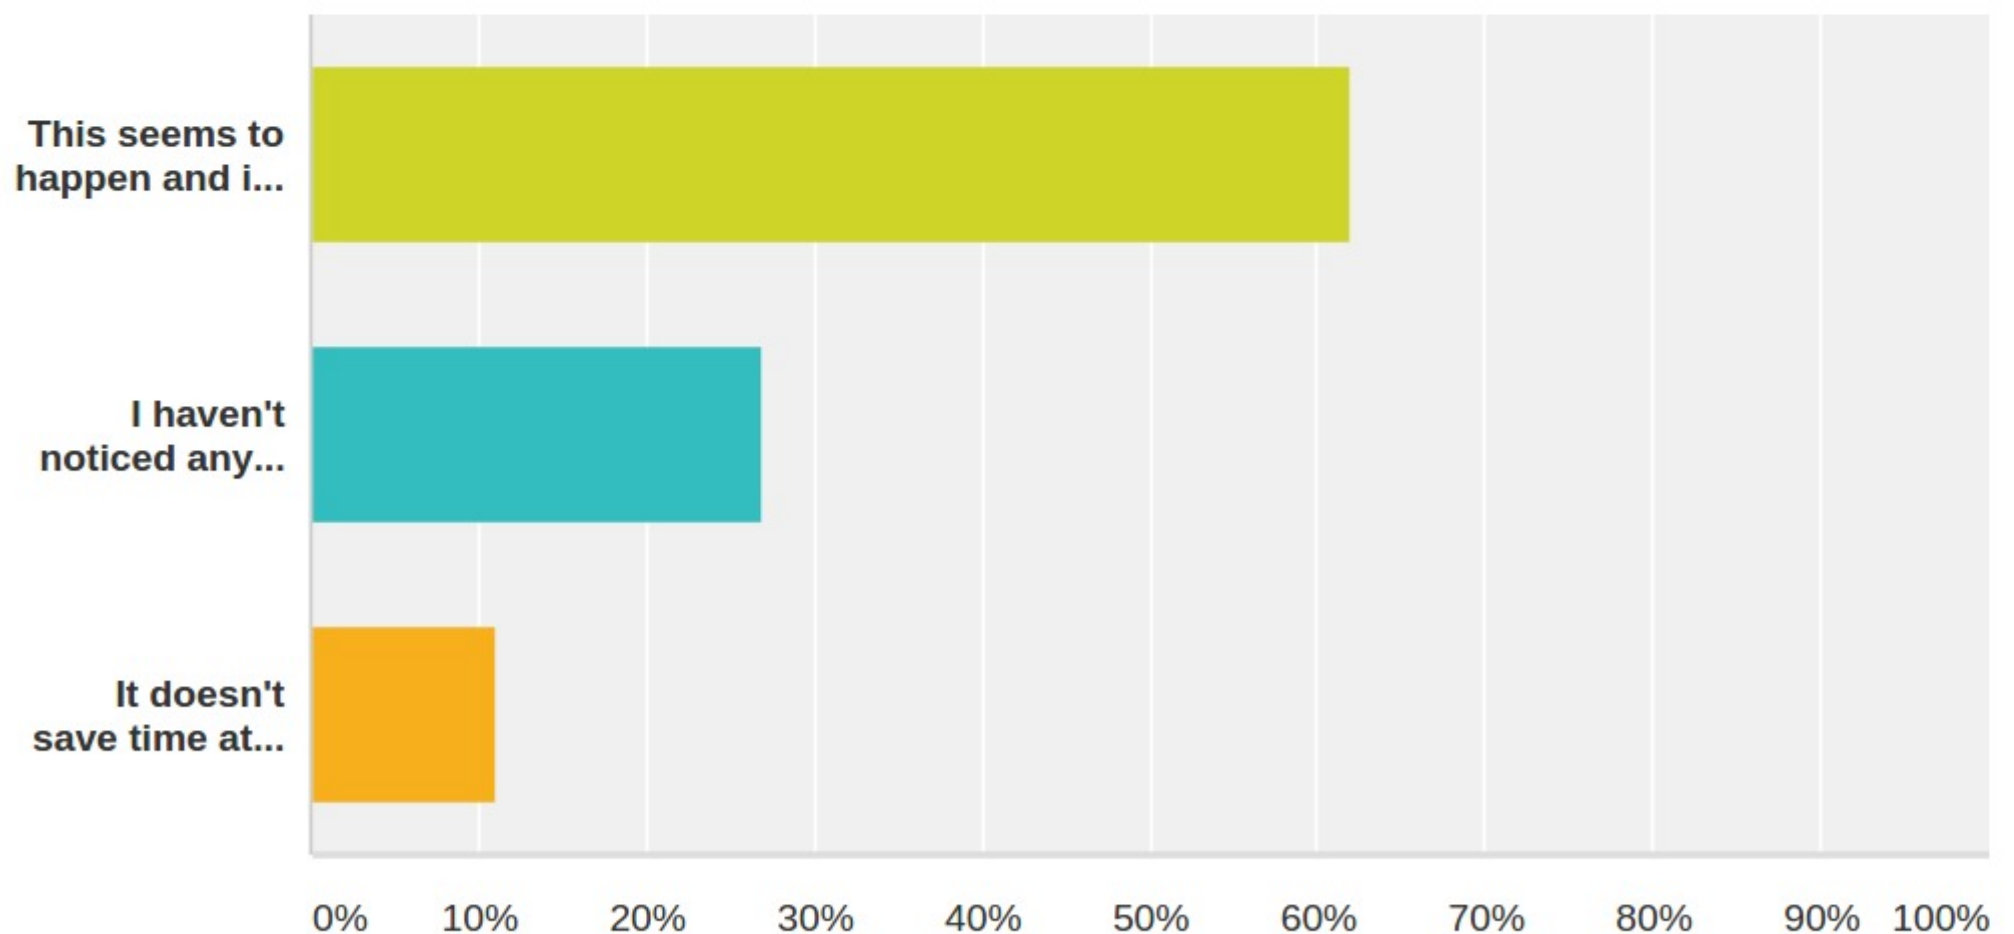

i don't always think my notes are exactly what we need to know because i don't have the course

I also don't think it's a great use of our homework time. I think it would be best to have printed notes handed out as then we wouldn't waste time writing them, and they would be neat and easy to read. If we have to write notes for homework, people tend to rush them resulting in too little information and they are unreadable.

Videos on the website are helpful

Reason 2: By saving time on making notes in lessons, we should have more time to do questions, practical work, or other stuff in lessons, and you should have more time to work on them, so you can work more independently rather than needing help from me.

<input type="checkbox"/> This seems to happen and it's good	61.90% 39
<input type="checkbox"/> I haven't noticed any difference in lessons since we started doing this type of homework	26.98% 17
<input type="checkbox"/> It doesn't save time at all - it takes longer doing things this way	11.11% 7
Total	63

I much prefer doing questions and practice in the lessons than notes

I get confused teaching myself and then come to the lesson and it is assumed I know it / go over it faster than usual and I feel like I just teach myself sometimes

I find that practicals sometimes aren't as useful as questions or notes, occasionally watching them is but sometimes carrying them out confuses me as we get incorrect results

The is one MAJOR problem - relies on us actually taking the time to make notes - not everyone will bother to do it every time. What if you misunderstand something? No way to know whether notes are completely sound - also doing just questions in lessons is boring and repetitive.

Yes doing more practice is really helping.

Although, when there is confusion it takes longer and then we go through it. Though we could do tricky ones together when they arise to waste less time.

The thing is this idea is good but if the videos get certain things wrong or set it out differently from you then there is confusion in lessons and time is wasted.

the only problem is that sometimes people do not work independently

I prefer to make notes in lessons because sometimes when making notes for homework, I don't fully understand the textbook and it is easier in lessons because I can ask you

can we do more practical work though

sometimes its quicker but sometimes we don't understand it and so make more notes on the same thing taking more time

I think that some notes are important to revise from which is what we are currently doing in lessons

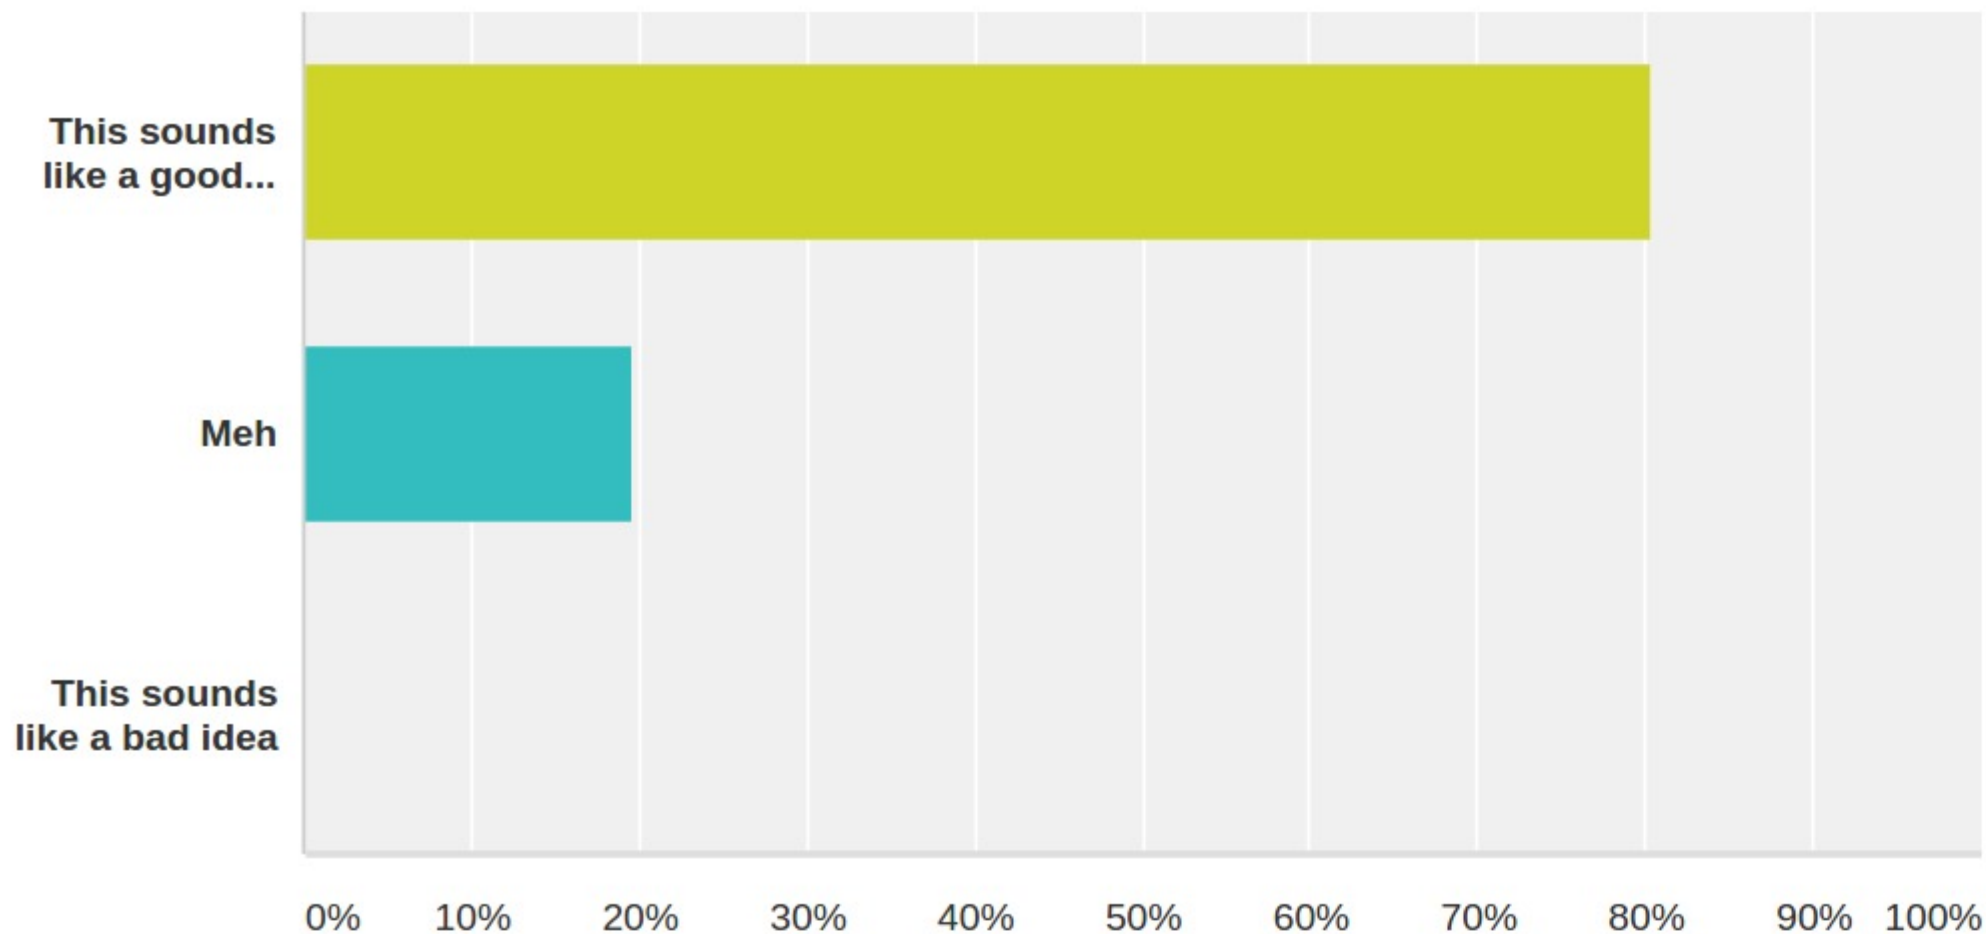

the lessons are easier to learn from.

i prefer to be taught it more because it makes more sense that way

It would also be nice to do whole class practicals/demonstrations, not just individual ones.

Some stuff on the Internet isnt true

Yeh normally after u tell us to search a specific video, it leads me onto a trail of a couple others which relate to it, and our world is becoming more technological anyway - we all might as well keep up with the youngsters!

Yes, because outside of lessons I enjoy expanding my physics knowledge by researching online and doing external reading

More engaging to learn from a living person rather than the voiceover of a video - videos better for extra research out of enthusiasm

I agree but i think it should not be totally independent learning- there should be a balance.

I completely agree.

A very good idea!

Independent learning can be challenging especially regarding concentration. I prefer class lessons and discussions.

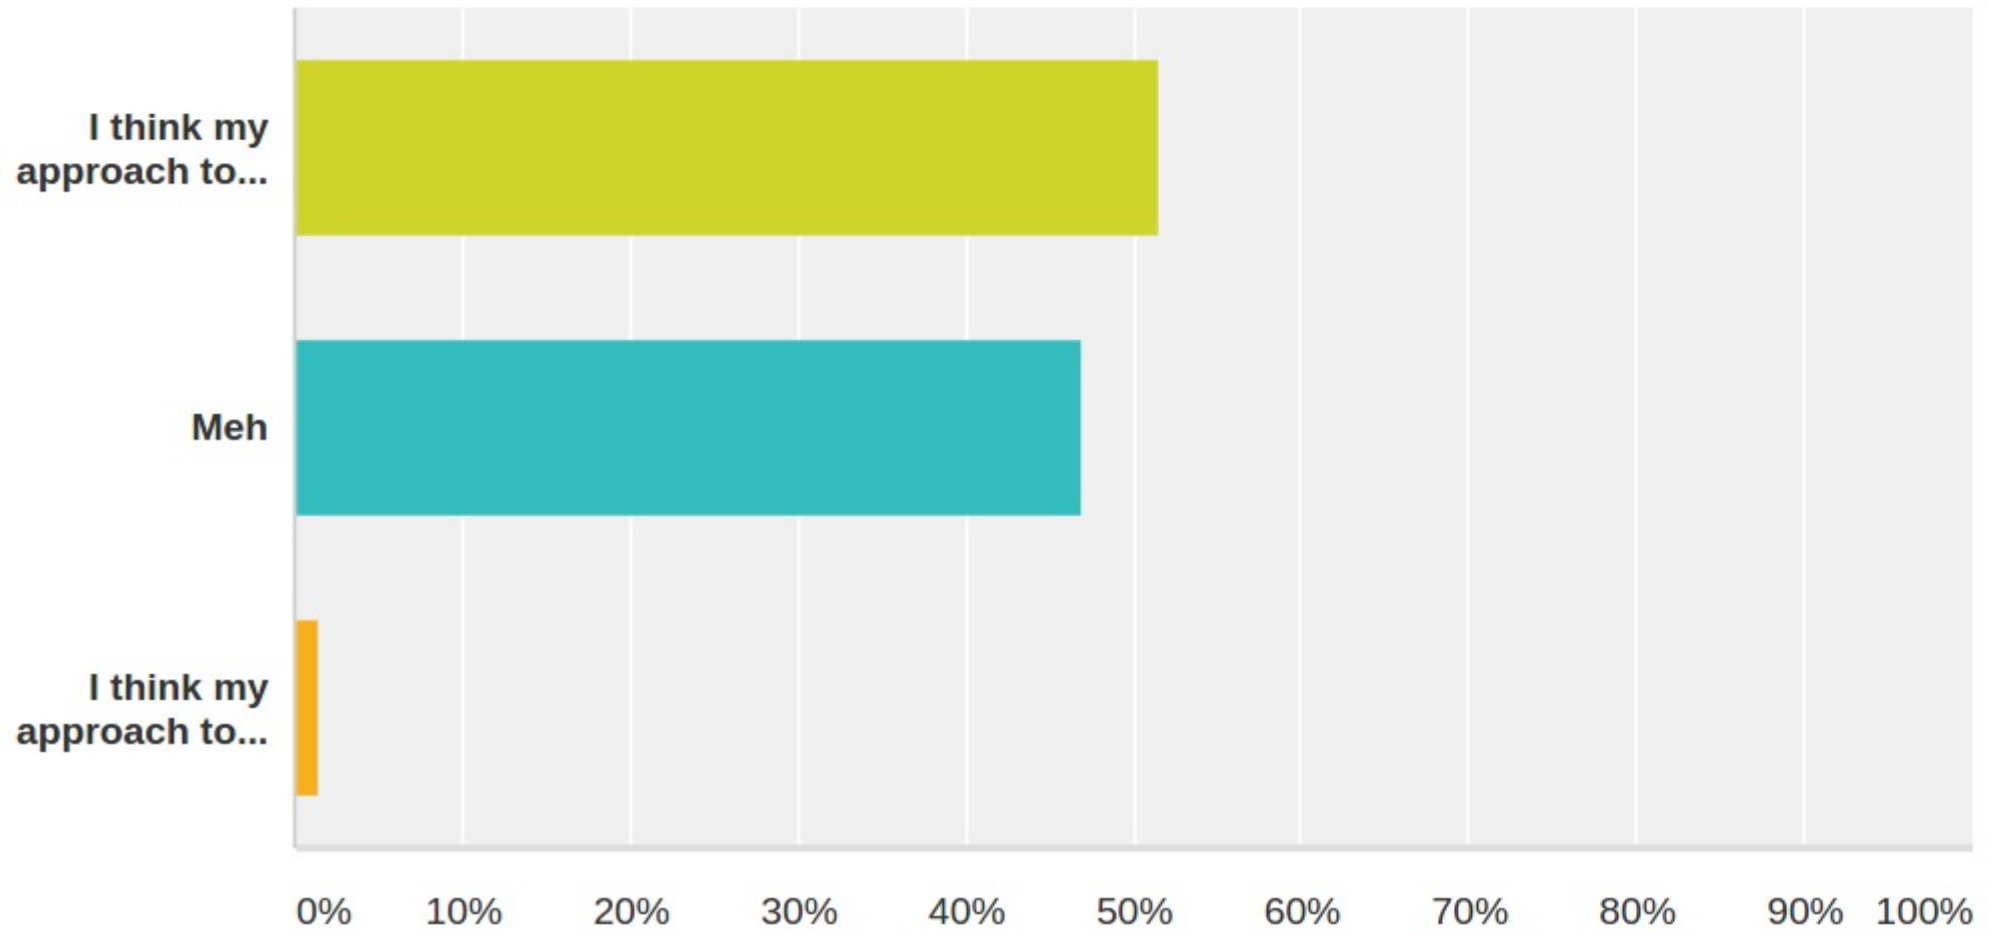

this sounds like a good idea but I don't understand how it works.

However, I would like to do a brief summary of the notes we did for homework in class. This way I can make sure I have not misunderstood anything.

This idea is especially conveyed through watching videos for homework. I feel like I learn more from them and they really show the possibilities in the world of physics.

We've been doing this in all of our lessons so I can't really compare it to anything,

improved interest too

I find the videos very enjoyable, and have actually gone on to watch a lot of the linked videos recommended by Youtube in my own time to revise topics or learn new ones

I find your own videos useful and concise but some Physics teachers on Youtube do take a while to get around to the point!

I find the online videos very helpful

It really good to be able to go over things for homework and watch videos and to do more practice in lessons.

Better than just doing summary questions. The classes that do openly say that they don't learn anything.

Because we do more questions

We haven't really had a steady go at it. It is a very different technique of teaching than compared with the more conventional methods that we are so far used to but i think if we get used to it then it could be successful.

because I enjoy physics, it doesn't matter what form the learning is in.

i find it difficult to understand how others explain it (sometimes)

I found revising for our most recent test much easier than I found revising in Year 9 because I could quickly recap lessons and understand my notes fully by re-watching some of the videos that we were set for our homework.

I don't feel like physics is really my subject but I think I have gotten a little better at it since the beginning of this year but I am not certain.

Again, the videos are awesome.

It would be nice to have more explanation about how to do the question rather than figuring it out ourselves
